COATING SYSTEM INTEGRATION- Turnkey project

FEATURES

- ANEST IWATA can provide complete turn key systems from the engineering and manufacturing to the installation and final testing of automated painting systems.
- We are a company that provides customers with the technology to get the best finish possible in the most efficient manner.
- We can offer optimum coating systems from simple handheld manual operations to complex robotic applications.
- We can provide rotary robot like "Swan" and 7 axis robots for painting or coating. Also we, install control systems for a fully automated process.

Coating examples

Automotive parts

In order to realize the highest coating quality, we provide a painting line that enhances the cleanliness inside the painting room.

Molded plastic parts

Molded plastic products requiring specialized finishes. We provide a coating system takes into consideration the painting environment necessary to satisfy the quality suitable for the workpiece and worker efficiency at loading and unloading workpieces.

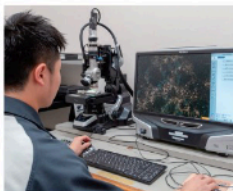

Small parts

It is possible to paint whatever can be held in your hands, including smartphones. The painting robot 'SWAN' is specialized for rotary spray painting. Our coating systems realize the reduction of paint usage and coating defects with high production efficiency.

Coating for metallic materials

Consistent coating quality and ideal finishes can be realized. All process except material handling work is automatic.

For coating systems we also have :

Painting Lines Engineering & Design

Conveyor and paint booth manufacturing

Installation of robots, paint booth, conveyor and oven.

Air shower for eliminating dust

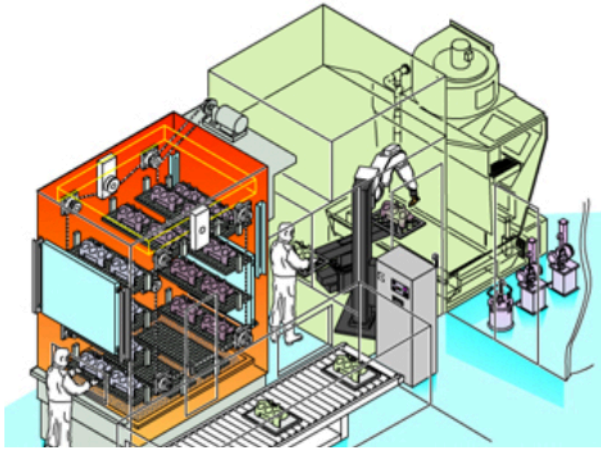

Drying ovens.

Curtain flow coater

COATING SYSTEM INTEGRATION- Turnkey project

We can save painting space, dry space and more.
 Installation space : L 6500 x W 3500 x H 4000
 (It is possible to offer other proposal)

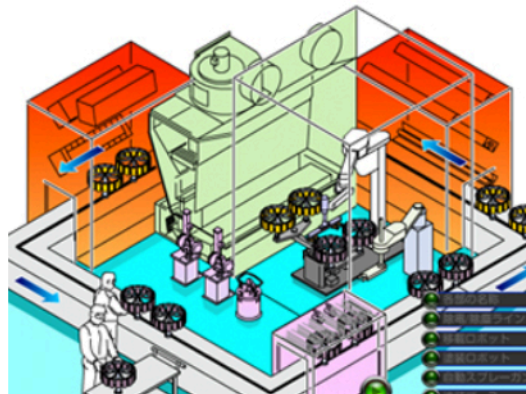

Target work piece

- Meter panel
- Air conditioning panel
- Console Box
- Door trim
- Dashboard

Paint line for small parts

Twin-Spin painting system

[Twin-Spin painting system]
 to paint rotating two drum jigs on one table

Ideal for frame body painting

- You can reduce cycle time and paint amount
- With separate painting process from conveyor, you can reduce conveyor dirt which causes a problem of coating particles. This separation will help you to raise good-production rate.
- With robotize work piece transfer, you can reduce a problem of coating particles which is caused by humans work and save man-power.

Paint savings

We provide a coating system with optimal paint savings and transfer efficiencies in mind.

Improvement of production efficiency

We aim to achieve high production efficiency while achieving the required quality.

Reduction of defective rate

In order to achieve the required quality, we propose the best coating system based on our own atomization and environmental equipment technology.

Improvement of working efficiency

We design the coating system considering the work content of the customer.

Reduction of maintenance cost

We design with consideration for ease of maintenance.

Energy cost saving

We aim to minimize power costs such as electricity, gas and water supply.

Utilization of advanced technology

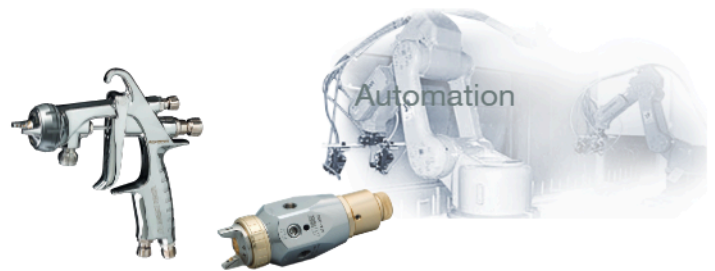

Full utilization of our leading edge atomization & material supply technology. We propose a solution suitable for the product.

Verification at the laboratory facility

We can verify at our coating laboratory facility and propose the best painting methods.

Development of new equipment

As a coating equipment manufacturer, we can develop equipment that meets our customers' demand.

Manual
